

To whomsoever it may Concern,

It gives me a lot of pleasure to recommend Mr. Mohit Singhi for masters studies at your esteemed university. During several years of my teaching experience in the present college, I have come across a wide spectrum of students. Considering all of his personal qualities I would place him among the top few of all my students in terms of aptitude, innovation and hard work. Mohit has been my student for four years. I have taught him various subjects in this period, as listed below:

- Software project management.
- Software testing & quality Assurance.

I was particularly impressed with the sincerity and methodical work that Mohit had put into learning. He has been working with a tremendous amount of perseverance and dedication, which I rate as one of the most important characteristics a student should possess. His zest to acquire knowledge is unbeatable. When it was time to choose one of the elective subjects in final year, he decided to choose artificial intelligence which was opted by very few students because of its complexity. His innate passion to excel at any task undertaken has resulted in good moral character. He has completed the project titled "Server Performance Tuning and Monitoring system in fulfillment of award of B. E. in Information Technology degree by Mumbai University from Tata Institute of Fundamental Research which is one of the most Renowned research center .

I have found Mohit to be a student with immense potential, which will help him succeed in his endeavor towards obtaining a Master's degree. I have absolutely no hesitation whatsoever in recommending Mohit for an admission with appropriate financial assistantship to University's Master's Program
